Dear Hiring Manager,

I am excited to apply for QA Automation opportunities within your organization. With over **13 years of experience in software quality assurance and automation**, I have built and led teams to deliver robust testing solutions across UI, API, database, and performance domains. My expertise lies in **designing scalable automation frameworks, integrating them with CI/CD pipelines, and leveraging AI-assisted testing tools to drive faster and more efficient releases.**

In my most recent role as **QA Manager at Bitxia Tech**, I led a team of 5–6 engineers and established an automation-first strategy using **Playwright and Cypress**. I successfully:

- Designed and implemented end-to-end automation frameworks for complex platforms such as **eNAM 2.0, APL Logistics COMS, Investor Portal, and Jarvis Retail Lending.**
- Integrated automation into **CI/CD pipelines (Jenkins, GitHub Actions)**, significantly reducing regression cycle time and improving release reliability.
- Introduced **AI-assisted testing practices (GitHub Copilot, Cursor AI)** to accelerate test development and enhance coverage.
- Mentored QA engineers on best practices, ensuring consistency and scalability across automation projects.

My technical toolkit includes **Playwright, Cypress, Selenium, Java, Python, TypeScript, Postman, SQL, Browserstack, Jenkins, GitHub Actions, and JIRA**. Beyond tools, my strength is in aligning QA strategy with business goals—ensuring that quality is embedded throughout the SDLC.

What excites me most is the opportunity to contribute to an organization that values **automation, continuous improvement, and quality-first delivery**. I am confident that my combination of technical expertise, leadership, and domain knowledge (including **Cards & Payments and Logistics**) would allow me to add immediate value to your QA initiatives.

I would welcome the chance to discuss how my skills align with your needs. Thank you for considering my application.

Sincerely,
Bhuwan Agrawal
